An inlay or onlay preparation conserves more of the natural tooth, removing less tooth substance (6-27%) compared to a full-coverage crown (68-76%). Definitions. An inlay is an indirect intracoronal restoration that does not support or replace cusps of a tooth. Furthermore, all occlusal contacts in centric, protrusive and lateral excursions are guided by cusps of the natural tooth.

An impression of preparation for restoration with a D0 gold inlay on tooth #5. The "D0" designation indicates that the gold serves as a restoration for the distal and occlusal surfaces of the tooth. This tooth was prepared and the inlay will be fabricated according to the R.V. Tucker method of gold inlay preparation. Notice how the line angles of the impression for the inlay are very sharp and ...

Inlays and onlays pdf writer PALI Education. 12.04.2018B B- Onlay preparation takes one dental visit, plus another visit for placement of the onlay and the restoration will last for years. When the permanent onlay is fitted, the tooth is stronger and looks better.

Onlay-preparation-pdf-|earmusicrecords.com

Preparation Visit for Onlays Onlays are pre-molded tooth restorations that fit when on the chewing surface of a cavity and extends over the biting surface (s) of the tooth. Your dentist might decide to fit an onlay because the tooth structure is weak and they suspect it would crack if filled with a regular filling.
