A helical stair is a stair in a helix around a central void. The approved document requires that spiral stairs and helical stairs are designed in accordance with BS 5395-2 Stairs, ladders and walkways. Code of practice for the design of helical and spiral stairs [1984 + AMD 6076, Corrigenda July 2008, C2, C3].

Spiral stairs and helical stairs - Designing Buildings Wiki

A helical staircase allows the people using it to ascend and descend in an arc as opposed the more regularly seen staircase designs which see people going up a flight of stairs which are made in a straight design.

Loads. •Permanent action: Weight of steps & finishes. Also consider increased loading on plan (inclination of the waist) •Stairs with open well: Two intersecting landings at right-angles to each other, loads on areas common to both spans may be divided equally between spans.

## DESIGN OF STAIRCASE

Spiral & Helical staircases are similar & tend to be utilised in many projects where innovative design is paramount. In essence, a Helical Stair has an inner & outer string; a Spiral stair has a central column. Both types of stairs can have inner & outer handrails, but both have external balustrade. ( Helical Staircases generally have inner AND external balustrades ).

At its most basic, a spiral staircase has a centre column supporting the treads. Helical staircases, meanwhile (or curved as they are also known), are much more varied in shape and have no central column. In essence, if it has a void in the middle of the staircase, it ' s helical (curved). Why Choose a Spiral Staircase? Though by no means exclusively, spiral stairs tend to be used when space is at premium. Thanks to their centre column, spiral staircases can be fitted into tight spaces.

## STAIRS Design & Construction

A helix staircase is simply a curved staircase. These kinds of staircases deliver the WOW factor and often create a centre piece for the entrance to many grand homes. The downside to helix staircases is that due to the complexity not many manufacturers even attempt to make them. Our in house team of experts have the skills to design a helix staircase that will give you the wow factor but also fit!

Steps to Design a Spiral Staircase. 1. First, take the dimensions of the stairwell opening. A spiral staircase has a 100mm smaller diameter than the given stairwell opening. (As per BS5395-2 1984). This provision makes the stairs to fit comfortably in the given space.

The stair is to be designed for a live load of 300 kg/m<sup>2</sup>. Use  $f_c = 250 \text{ kg/cm}^2$ ,  $f_y = 4200 \text{ kg/cm}^2$ , and 2.2t/m<sup>3</sup> g plaster. Figure 10.9.a: Longitudinally supported stairs Solution: Minimum stair thickness required to satisfy deflection requirements is given by  $h \geq 20.4 \sqrt{480 \text{ min } 0.85} = 21.0 \text{ cm}$ . Let slab waist  $t$  be equal to 21.0 cm.
