Vandrebøgerne Vandrebøgerne, er skrevet i perioden 1938-1952. De cirkulerede mellem 8 søskende og deres forældre. Sammen med deres øgtefæller og efterhånden også deres børn skrev de om dagliglivet og kommenterede begivenhederne i samfundet. Bøgerne var et led i, at holde sammen på familien i takt med, at de efterhånden som de blev uddannet og gift blev spredt over hele landet. Det blev til i alt ca. 2500 sider fordelt i 12 vandrebøger, der afspejler mange af de begivenheder, der på godt og ondt ramte familien, men som de også kunne stå sammen om. Vandrebøgerne repræsenterer et specielt stykke dansk samtidshistorie. Man kan følge dagligdagen i familien og deres syn på samtiden. Vandrebøgerne er interessante langt ud over deres samtid og ikke mindst en værdifuld arv til de næste generationer efter dem. Denne bog omfatter de 6 første af de i alt 12 vandrebøger. Bøgerne er "oversat" fra håndskrift, som selv de nærmeste efterkommere har besvær med i dag. Familien Kirstine Mathiasen (omtalt som mor) var den ældste af en børneflokk på 7 søstre, født i 1883 i Dyrvig, Høven sogn i det midtjyske. Hun kom i huset i 1899 hos Venstres leder T.C. Christensen, der var lærer i Stausning, hvor hun også virkede som hjælpelærer. I 1903 blev hun husbestyrerinde hos IP Hansen, som var bestyrer af Sdr. Omme Plantage og som hun blev gift med i 1905. Jens Peter Hansen (IP Hansen, omtalt som far) blev født i Ringgive i 1879. Han blev uddannet planter og dræningsingeniør på Birkebæk plantage under Dalgaard. 1901-1910 blev han den første bestyrer af Sdr. Omme Plantage. 1910-1915 bestyrer af Fæsterholt Plantage. 1915-1929 gårdejer af "Dankjær" ved Vejle. 1929-1944 gårdejer "Hedelund" ved Esbjerg. Kirstine og IP fik i alt 8 børn og 22 børnebørn. Vandrebøgerne fortæller også en historie, der viser den kærlige ballast børnene fik hjemefra og ikke mindst friheden og lysten til at debattere mange kulturelle og politiske emner i tiden.

Pharmacokinetics is the study of the absorption, distribution, metabolism, and excretion of drugs in humans. This book, written by an internationally known researcher, teaches the basic principles, including drug transport, parenteral and enteral routes of drug administration, and factors affecting drug absorption, distribution, and metabolism. Extensively revised, this edition presents the mathematics of pharmacokinetics with various single- and multi-compartment models including detailed descriptions of metabolite and nonlinear pharmacokinetics. It also describes renal and hepatic drug clearance, and the influence of kidney and liver impairment on these functions. Taking a tutorial approach throughout, the author provides both a clear introduction to pharmacokinetics and a critical look at how this science affects drug discovery and development.

School mathematics curricula internationally tend to emphasize problem-solving and have led to the development of opportunities for children to do maths in a more open, creative way. This has led to increased interest in 'performance-based' assessment, which involves children in substantial production of written language to serve as 'evidence' of their mathematical activity and achievement. However, this raises two important questions. Firstly, does this writing accurately present children's mathematical activity and ability? Secondly, do maths teachers have sufficient linguistic awareness to support their students in developing skills and knowledge necessary for writing effectively in their subject area? The author of this book takes a critical perspective on these questions and, through an investigation of teachers' readings and evaluations of coursework texts, identifies the crucial issues affecting the accurate assessment of school mathematics.

Victor Faust's new Order is growing. Business is good as there is no rest for the wicked in an underground world of hardcore criminals and contract killing. Relationships among the operatives have changed little over the past year—but things are about to change now, and all six high-ranking members of the new Order will be blindsided by an unlikely enemy. Loved ones whose only ties to Victor's organization are their relationships with its members, are abducted. The price to get them back safely—the six must confess their deepest, darkest secret to this mysterious young woman named Nora, who is as deadly as she is beautiful, and who seems to know more about each of them than they know about each other. And although no one has any clue about who Nora really is, it becomes clear that she also isn't who she appears to be. So much more is at stake than secrets and the lives of innocent loved ones; with each member that Nora forces to confess, the truth about their dark pasts and their present objectives will cast suspicion, pit some against each other, and may tear others apart. Before the game is over everyone will know who this woman is and why she is here, but the damage she will leave in her wake could be the beginning of the new Order's destruction. Whose dark secret will be the darkest of all? And can Victor's Order survive any of them?
