Pattern

11.1.10 Since x and z are independent, their joint distribution

factorizes $p(x, z) = p(x)p(z)$, and so

$$E[x+z] = \iint (x+z)p(x)p(z) dx dz$$

$$= \int x p(x) dx + \int z p(z) dz \quad (18)$$

$$= E[x] + E[z]. \quad (19)$$

$$(20)$$

Similarly for the

variances, we first

note that $(x+z - E[x+z])^2 = (x - E[x])^2 + (z - E[z])^2$

$$2 = (x - E[x])^2 + (z - E[z])^2$$

With the growing complexity of pattern recognition related problems being solved using Artificial Neural Networks, many ANN researchers are grappling with design issues such as the

Read Online

Pattern

size of the network, the number of training patterns, and performance assessment and bounds. These researchers are continually rediscovering that many learning procedures lack the scaling property; the procedures simply fail, or yield

Read Online Pattern

unsatisfactory results when applied to problems of bigger size. Phenomena like these are very familiar to researchers in statistical pattern recognition (SPR), where the curse of dimensionality is a well-known dilemma. Issues related to the training and test sample sizes, feature

Read Online Pattern

space dimensionality, and the discriminatory power of different classifier types have all been extensively studied in the SPR literature. It appears however that many ANN researchers looking at pattern recognition problems are not aware of the ties between their field and SPR, and

Read Online Pattern

are therefore unable to successfully exploit work that has already been done in SPR.

Similarly, many pattern recognition and computer vision researchers do not realize the potential of the ANN approach to solve problems such as feature extraction, segmentation, and object recognition.

Read Online Pattern

The present volume is designed as a contribution to the greater interaction between the ANN and SPR research communities.
