Leonardo da Vinci's scientific explorations were virtually unknown during his lifetime, despite their extraordinarily wide range. He studied the flight patterns of birds to create some of the first human flying machines; designed military weapons and defenses; studied optics, hydraulics, and the workings of the human circulatory system; and created designs for rebuilding Milan, employing principles still used by city planners today. Perhaps most importantly, Leonardo pioneered an empirical, systematic approach to the observation of nature-what is known today as the scientific method. Drawing on over 6,000 pages of Leonardo's surviving notebooks, acclaimed scientist and bestselling author Fritjof Capra reveals Leonardo's artistic approach to scientific knowledge and his organic and ecological worldview. In this fascinating portrait of a thinker centuries ahead of his time, Leonardo singularly emerges as the unacknowledged "father of modern science." From the Trade Paperback edition.

It may be starred, beeped, and censored -- yet profanity is so appealing that we can't stop using it. In the funniest, clearest study to date, Benjamin Bergen explains why, and what that tells us about our language and brains. Nearly everyone swears-whether it's over a few too many drinks, in reaction to a stubbed toe, or in flagrante delicto. And yet, we sit idly by as words are banned from television and censored in books. We insist that people excise profanity from their vocabularies and we punish children for yelling the very same dirty words that we'll mutter in relief seconds after they fall asleep. Swearing, it seems, is an intimate part of us that we have decided to selectively deny. That's a damn shame. Swearing is useful. It can be funny, cathartic, or emotionally arousing. As linguist and cognitive scientist Benjamin K. Bergen shows us, it also opens a new window onto how our brains process language and why languages vary around the world and over time. In this groundbreaking yet ebullient romp through the linguistic muck, Bergen answers intriguing questions: How can patients left otherwise speechless after a stroke still shout Goddamn! when they get upset? When did a cock grow to be more than merely a rooster? Why is crap vulgar when poo is just childish? Do slurs make you treat people

differently? Why is the first word that Samoan children say not mommy but eat shit? And why do we extend a middle finger to flip someone the bird? Smart as hell and funny as fuck, What the F is mandatory reading for anyone who wants to know how and why we swear.

Will Jelbert had what many people would consider the ideal life: a well paying job, a beautiful wife and a great apartment, but he still wasn't happy. One day the life he knew came to an abrupt end when he was thrown from his bike, face first into the sidewalk of a Sydney street. After a year in recovery, Jelbert decided to dedicate the next three years to a happiness research project. The result: The Happiness Animal. The world's first dedicated exercise guide to happiness condenses the latest applied positive psychology research into a guide to five muscles for happiness. For each muscle, Jelbert provides five simple exercises that you can apply to your everyday life, without having to adjust your schedule. Perfect for people in all walks of life, the exercises in The Happiness Animal will move you toward profound personal change and act as a driving force for your happiness.. Editorial Reviews: * * * * * "Will has an incredible ability to say things that are logical and obvious, although without somebody pointing them out in the clear way he has done, most of us don't ever think them. He identifies the power of awareness, but before I read his book I was not even aware of many of my own thoughts" - Danny Lawrence, BBC * * * * * "Will has captured an immense understanding of the inner workings of society's struggle to find happiness with a whole hearted and honest truth. The exercises explained are an excellent route back to the inner being of happiness. A must read for everyone!" - Sadie Oliver, LIFE magazine * * * * * "Will writes with honesty, authenticity and animation that allows the words on each page to come alive and live within the reader" - Lucy Proud, The Art of Being Voted "Best Happiness Book" on Goodreads

From the acclaimed author of *The Box*, a new history of globalization that shows us how to navigate its future. Globalization has profoundly shaped the world we live in, yet its rise was neither inevitable nor planned. It is also one of the most contentious issues of our time. While it may have made goods less expensive, it has also sent massive flows of money across borders and shaken the global balance of power. *Outside the Box* offers a fresh and lively history of globalization, showing how it has evolved over two centuries in response to changes in demography, technology, and consumer tastes. Marc Levinson, the acclaimed author of *The Box*, tells the story of globalization through the people who eliminated barriers and pursued new ways of doing business. He shows how the nature of globalization changed dramatically in the 1980s with the creation of long-distance value chains. This new type of economic relationship shifted manufacturing to Asia, destroying millions of jobs and devastating industrial centers in North America, Europe, and Japan. Levinson describes how improvements in transportation, communications, and computing made international value chains possible, but how globalization was taken too far because of large government subsidies and the systematic misjudgment of risk by businesses. As companies began to account properly for the risks of globalization, cross-border investment fell sharply and foreign trade lagged long before Donald Trump became president and the coronavirus disrupted business around the world. In *Outside the Box*, Levinson explains that globalization is entering a new era in which moving stuff will matter much less than moving services, information, and ideas.

In her surprising, entertaining and persuasive new book, award-winning author and psychologist Susan Pinker shows how face-to-face contact is crucial for learning, happiness, resilience and longevity. From birth to death, human beings are hard-wired to connect to other human beings. Face-to-face contact matters: tight bonds of friendship and love heal us, help children learn, extend our

lives and make us happy. Looser in-person bonds matter, too, combining with our close relationships to form a personal "village" around us, one that exerts unique effects. And not just any social networks will do: we need the real, face-to-face, in-the-flesh encounters that tie human families, groups of friends and communities together. Marrying the findings of the new field of social neuroscience together with gripping human stories, Susan Pinker explores the impact of face-to-face contact from cradle to grave, from city to Sardinian mountain village, from classroom to workplace, from love to marriage to divorce. Her results are enlightening and enlivening, and they challenge our assumptions. Most of us have left the literal village behind, and don't want to give up our new technologies to go back there. But, as Pinker writes so compellingly, we need close social bonds and uninterrupted face-time with our friends and families in order to thrive--even to survive. Creating our own "village effect" can make us happier. It can also save our lives.

The essential beginner's guide to string theory The Little Book of String Theory offers a short, accessible, and entertaining introduction to one of the most talked-about areas of physics today. String theory has been called the "theory of everything." It seeks to describe all the fundamental forces of nature. It encompasses gravity and quantum mechanics in one unifying theory. But it is unproven and fraught with controversy. After reading this book, you'll be able to draw your own conclusions about string theory. Steve Gubser begins by explaining Einstein's famous equation $E = mc^2$, quantum mechanics, and black holes. He then gives readers a crash course in string theory and the core ideas behind it. In plain English and with a minimum of mathematics, Gubser covers strings, branes, string dualities, extra dimensions, curved spacetime, quantum fluctuations, symmetry, and supersymmetry. He describes efforts to link string theory to experimental physics and uses analogies that nonscientists can understand. How does Chopin's
