When setting photoflash exposures, the guide number (GN) of photoflash devices (flashbulbs and electronic devices known as "studio strobes", "on-camera flashes", "electronic flashes", "flashes", and "speedlights") is a measure photographers can use to calculate either the required f?stop for any given flash-to-subject distance, or the required distance for any given f?stop. To solve for either of these two variables, one merely divides a device's guide number by the other.

Guide number - Wikipedia

Guide Number = [Flash to Subject Distance] x [F-Stop] Before we dig into some examples, it's important to note the following constant in the

File Type PDF What Is Guide Number In Flash Photography

equation: ISO. When a guide number is calculated, it is often assumed that the ISO is set to 100 , since increased ISO numbers will have an impact on the guide number calculation.

Flash Guide Number

Guide Number (GN) is a numerical method used to determine exposure of direct flash for Manual flash power levels, to automatically deal with the Inverse Square Law, making the math be trivial. The reference base is a known accurate Guide Number for one situation, from which other situations can be calculated.

Understanding Camera Flash Guide Numbers, plus GN Calculator

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater the distance at which the light from the flash is sufficient for optimal exposure. The formula for calculating the guide number is as follows: Guide number (GN)=distance (meters) × aperture (f-number)

Flash Level (Guide Number) - Nikon | Imaging Products

Specifically, a flash unit's guide number indicates how much light the unit will emit in relation to a standard film speed. The higher the guide number, the more powerful the flash. This number is usually indicated in the owner's manual of the flash. It's represented as "GN 118 with ISO 100 film."

Demystifying Flash Guide Numbers

Guide number (GN)=distance (meters) × aperture (f-number) The units of measurement of guide number (GN): Aperture (f-number): Because f-stop is a ratio, there are no units associated with it. With the cameras we use, everything is measured in millimeters, but it could as easily be measured in feet or cubits.

Tutorial: How to use the guide number of your flash - Tangents

The effective range— and therefore the guide number— of any flash will be affected by the use of diffusers, soft boxes, or any other type of flash modifier, as well as whether the flash head is zoomed out or not. Also, remember that guide numbers are usually calculated based on a full-frame (35mm equivalent) sensor.

Making Sense of Your Flash's Guide Number - DIY Photography

Guide Number simply is the multiplied product of (flash distance x f/stop) for a proper exposure situation (normally specified for ISO 100). For example, if a certain Guide Number were equal to 100 (feet), then it says a correct direct flash exposure is f/20 at 5 feet, or f/5 at 20 feet, or f/10 at 10 feet, etc.

Compare Power Rating of Camera Flashes with Guide Numbers

File Type PDF What Is Guide Number In Flash Photography

A flash's power is determined by its Guide Number, with low Guide Numbers (GN) indicating a weak or less powerful flash than one with a high GN. For ease of comparison, most flash GNs are rated for an ISO 100 film. If you use a film with a lower ISO the GN will be lower, and, conversely, if you use a higher speed film the GN will be higher.
